

# Infrastructure Services

## Bridging Divides

We create the platform on which further investment in broader community accommodation and related services can be made. As an integrated part of enabling regeneration, we offer infrastructure solutions to communities across the United Kingdom, providing a one-stop-shop for complex, multi-disciplinary transport projects including road building, rail and tunnelling.

We offer a comprehensive range of services to all utilities sectors including gas, electricity and water, from the provision of meters, new mains, rehabilitation work to installation of new electricity transmission and distribution plant and water treatment works facilities. Supported by our core services we are capable of providing total energy and waste solutions that ensure community renewable energy and waste recycling targets are met.

With a reputation built upon innovation, technical expertise and professional delivery and a culture committed to providing the best possible solutions together, we facilitate change through successful partnership with public sector clients, who demand the highest possible standards of expertise, commitment to quality and efficient delivery capability.

Involving stakeholders throughout our projects, we deliver economic and environmental benefits by enhancing communication and access to investment opportunities in local communities.
